2025 Assessment

Use the links below to begin and/or resume your 2025 PREP Self-Assessment activity.

2025 Assessment - Learner Mode

- Learner Mode displays the question vignette, response choices, and critique/feedback as soon as a response is submitted to each individual question.
- Assessments are required to be completed in learner mode first in order for learners to meet CME completion requirements.

Points out of 1.00
+ Flag question
Comment

A 15-year-old girl is seen for a routine health supervision visit. She has been doing well and has not had any significant illness. Menarche was at age 12 years. Her menses occur monthly, last for 8 days, and she uses 8 pads per day. Menstrual flow is heaviest the first 2 days. She eats a well-balanced diet with no food restrictions. Her vital signs are normal for age. Other than pallor of the conjunctivae, her examination findings are unremarkable.

Laboratory data are shown:

Laboratory Test	Result
White blood cell count	7,300/ μ L (7.3×10^9 /L)
