

Our Skills for Joined Work

Guozheng Liu

- 1. Linker and chelator synthesis**
- 2. Radiometal labeling**
- 3. In vivo evaluation (chemistry)**
- 4. Kit formulation of labeled compounds**

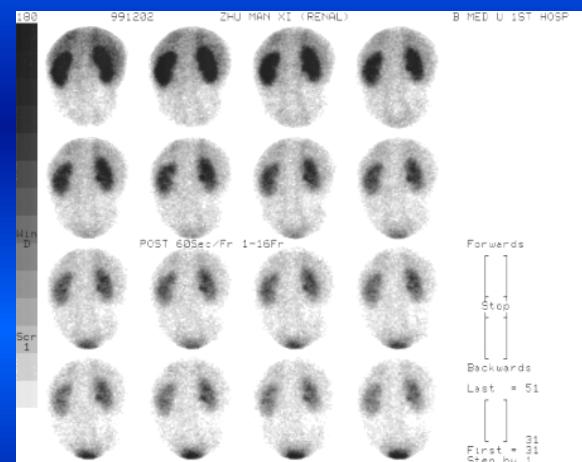

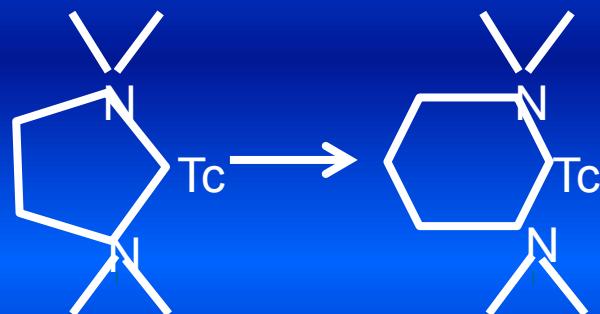

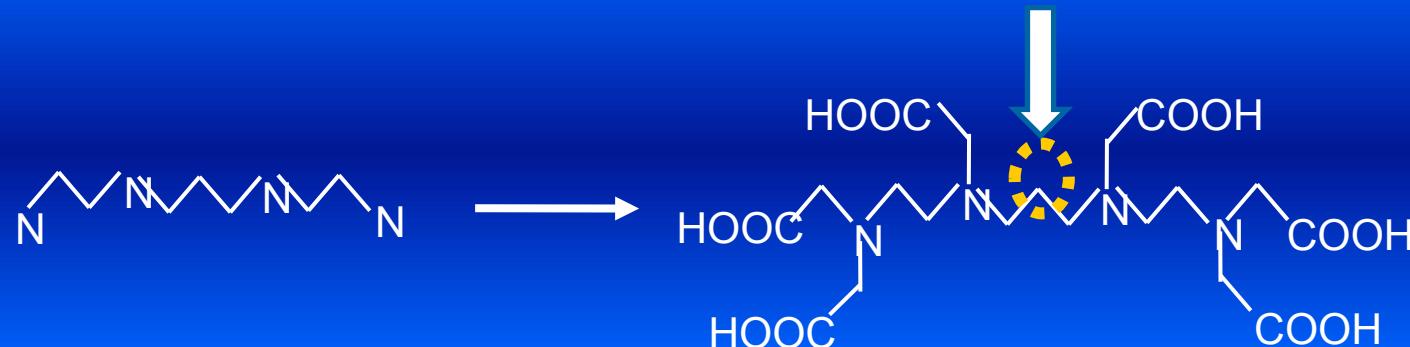

1. Linker and chelator synthesis

New synthetic route for MDP (for routine bone imaging in the clinic)

Kit formulized in China and routinely used in the clinic

A novel polyaminopolycarboxylate (BPHA)

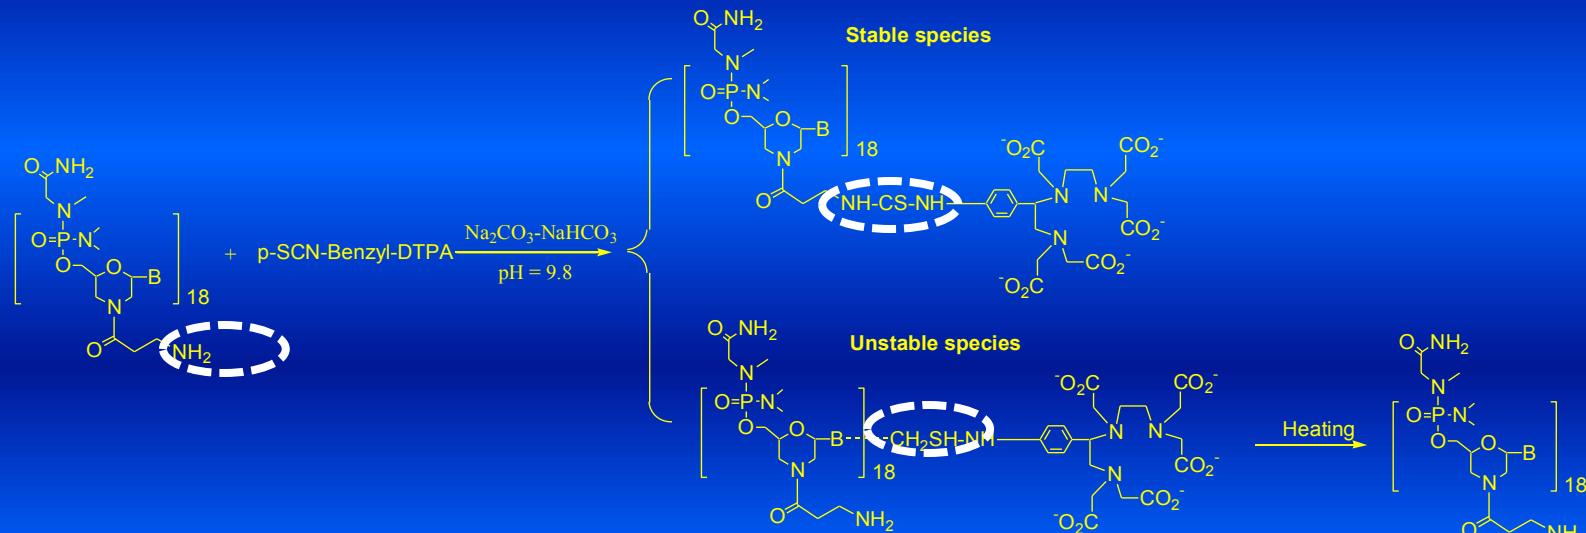

Normal
Volunteer

Radiometal labeling

1. ^{99m}Tc , $^{186, 188}\text{Re}$, ^{111}In , ^{90}Y , $^{67, 68}\text{Ga}$,

2. Ability to figure out the side reactions and improve labeling efficiency

Low ^{90}Y labeling efficiency

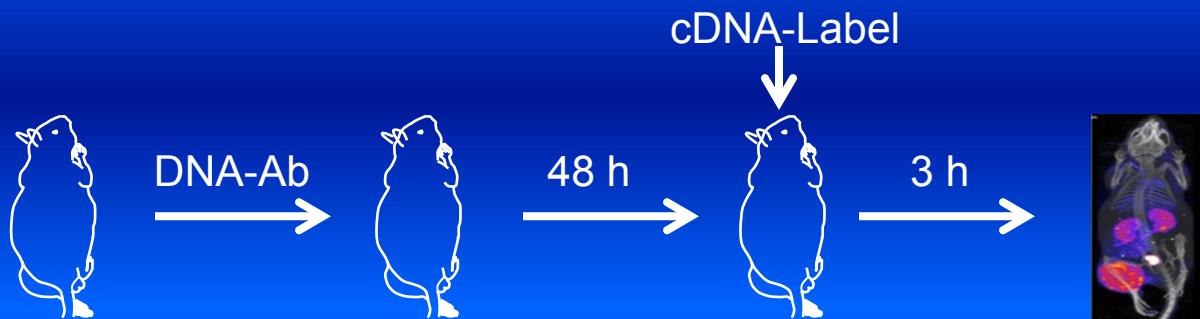

Similar problem for ^{99m}Tc labeling using MAG_3

In Vivo Chemistry

1. Pretargeting: In vivo A + B \longrightarrow A-B

2. Clearance
